

# One size fits all

With Natural Motion Technology, there's no need to worry about finding the right size shield. The collapsing motion of the pump, and soft, flexible shield means the pump continually adapts to your nipple size. One size really does fit all.\*\*

# The best pump for your needs

Our Natural Motion Technology comes in single electric or double electric pumps, and there are different benefits to each. To choose the best pump for you, look for one that helps you feel comfortable and fits into your overall lifestyle.

**Would you like a fast pump that helps you feel more comfortable?**

Try this: Single electric breast pump.

**Are you after something that's comfortable and extra efficient?**

Try this: Double electric breast pump.

\*Based on product clinical trial (n=20) conducted in the Netherlands, 2019, compared to results of previous product version.

\*\*Up to 30mm

Electric breast pump

**A new era of  
pumping for moms  
that's simple,  
fast and gentle**

# Keeping breast milk on the menu

If you've decided to breastfeed, a pump can be a handy way to add some flexibility to your breastfeeding routine.

Some moms begin pumping when they return to work so their baby can still have the benefits of breast milk. Others moms pump occasionally to relieve their breasts, or so their partner can help with night feeds.

No matter when or why you begin to pump, the key to a positive pumping experience is comfort. Studies show that the more comfortable you feel, the easier it is to release milk.

## Professional tip

Here are a few things to keep in mind when you're starting out.

- 1 Plan when and where you'd like to pump
- 2 Find a pump that suits your needs
- 3 Pump in a comfortable place for quicker milk flow
- 4 Pump as many times as you would feed

# Inspired by the best

We believe your baby knows best when it comes to drawing out milk.

That's why we've spent over 30 years studying exactly what happens when a baby suckles at the breast.

## Pro insight

From our extensive studies, we've discovered that both nipple massage and suction are key for a quick milk flow.

1

Baby latches on.

2

Baby uses suction and a wave-like tongue movement to press against the nipple.

3

This natural drinking motion allows baby to stimulate the best possible milk flow.

# A new era of pumping

A revolutionary new breast pump that makes expressing simple, fast and gentle.

Until now, breast pump technology has only focused on suction to draw milk out from the breast.

Our new Natural Motion Technology combines massage and suction, like baby, for a quicker, natural milk flow.\*

1

Soft shield touches the nipple.

2

Pump stimulates like baby using suction and a shield that collapses around the nipple.

3

This Natural Motion Technology stimulates quicker milk flow.
